

Generative AI For Scrum Teams

Start Date: 5/26/2025 9:00 AM

End Date: 5/27/2025 5:00 PM

In this dynamic and hands-on class, you'll explore how tools like ChatGPT, GitHub Copilot, and AI-powered planning assistants can help your Scrum Team boost productivity, streamline communication, and foster creativity in product development.

Whether you're a ScrumMaster, Product Owner, or Developer, this course provides practical techniques and real-world use cases tailored to each role. You'll learn how to integrate Generative AI into your sprint planning, backlog refinement, daily collaboration, and even retrospectives.

What You'll Learn:

How Generative AI aligns with Agile values and Scrum principles

Using AI to facilitate backlog grooming, story writing, and estimation

Enhancing Developer productivity with AI-assisted coding and test generation

AI tools to support Product Owners with roadmapping and customer insights

Improving Scrum Events with intelligent prompts and automation

Guardrails: How to use AI ethically and responsibly in Scrum

Who Should Attend:

ScrumMasters looking to support their teams with smarter workflows

Product Owners eager to harness data and AI for better decision-making
